Appendix A

Indexes and Values for Total Exports and Imports and Major Classes, 1879-1960

This appendix includes the following two sets of data:

(1) Tables A-14 through A-29 (basic tables) present price and quantity indexes and values for the period 1879-1923 for the NBER major classes. These data provide information on total exports (Export Class 220) and total imports (Import Class 221), on the five major economic classes into which the Department of Commerce divides foreign trade, and on selected combinations and variations of them.

Annual Fisher price and quantity indexes and dollar values are presented for all of the 22 export classes and 23 import classes. In addition, for 12 selected major classes, the basic tables include annual Paasche and Laspeyres price indexes, quarterly Fisher price and quantity indexes, and quarterly dollar values. (See Table A-30.)

(2) In Tables A-1 through A-11 the NBER data for 1879-1923 are combined with statistics of the Department of Commerce and the Department of Agriculture to extend certain series forward to 1960 and several back to 1869. For the period 1879-1960, annual price and quantity indexes and dollar values are presented for total exports and imports, for the five major economic classes used by the Department of Commerce, and for agricultural products. The NBER major classes which are used for these breakdowns for the period 1879-1923 are indicated in the individual table notes.

The correspondence between the major economic classes of the Department of Commerce and the comparable NBER classes is not exact because of the way in which miscellaneous articles, not elsewhere specified, are handled. The Department of Commerce includes this group with manufactured products and its five groups therefore sum to the total. The NBER series, on the other hand, include these articles in the total, but they are not assigned to any of the five major economic classes. The difference in value figures for 1879-1923 between total exports or imports and the sum of the five economic classes is therefore attributable to these miscellaneous articles.

Certain adjustments in price and quantity indexes and in value figures have been incorporated in Tables A-1 through A-11, to take into account the change in the United States customs area in 1900. The specific adjust-

ments are indicated in the individual table notes. For a detailed explanation of the adjustments, see Appendix F.

Two additional tables are presented to show the classification scheme of exports and imports:

Tables A-12 and A-13 show the main components, by value, of the five major classes in the NBER series which correspond to the Department of Commerce economic classes.

Table A-30 shows, for each major class, the composition in terms of intermediate, minor or other major classes.
