A Note on Sources

<i>Series</i>	<i>Source</i>
New Passenger Car Registrations 1928-41, 1947-63	Automobile Manufacturers' Association <i>Automobile Facts and Figures</i> (Original source—R. L. Polk and Co.)
Automobile Production, Sales 1921-34, 1956-63	Automobile Manufacturers' Association <i>Automobile Facts and Figures</i>
Automobile Factory Sales 1934-41, 1946-63	Automobile Manufacturers' Association <i>Automobile Facts and Figures</i>
All Credit Series	1929-39, <i>Federal Reserve Bulletin</i> , June 1955. 1940-63, FRB, <i>Supplement to Banking and Monetary Statistics</i> , 1965. 1964- , <i>Federal Reserve Bulletin</i> , se- lected issues.

NOTE: There is considerable confusion concerning factory sales and auto production. The Automobile Manufacturers' series entitled New Car Production, 1921-34, is actually the same as that labelled "monthly passenger car factory sales," so that we have in effect a continuous series from 1921-41. The original source (*Automobile Facts and Figures*) carried regular footnotes explaining that what was called production in the period 1921-34 was really factory sales. Only the second half of their series labelled production (1956-63) genuinely represents production. Now they distinguish monthly production data defined as "the number of vehicles coming off the assembly line" from factory sales defined as "vehicles for which title has been transferred by manufacturers to dealers and consumers."

There need be no confusion about our use of these data. In Chart 12 the segment labelled production for 1921-34 represents sales as well. Only for the most recent period are the three measures of auto activity truly separable. However, in Chart 12 we have utilized Department of Commerce production data for the postwar period, rather than the Automobile Manufacturers' series because the former is available for 1946 to date, whereas the latter did not commence until 1953.

NOTE: See Appendix Tables B-2, B-3, and B-4. These average timing patterns are based on the 4 peaks and 5 troughs in new passenger car registrations as the reference dates. All three series show peaks and troughs comparable to those of passenger car registrations, plus additional turns not shown by registrations. Net credit has 8 extra turns (4 peaks and 4 troughs); extensions has 10 extra turns (5 peaks and 5 troughs); and outstanding has 4 extra turns (2 peaks and 2 troughs). The averages include 2 prewar and 2 postwar peaks; 2 prewar and 3 postwar troughs. The May 1941 peak has been excluded from all averages.
