

This PDF is a selection from an out-of-print volume from the National Bureau of Economic Research

Volume Title: The Formation and Stocks of Total Capital

Volume Author/Editor: John W. Kendrick

Volume Publisher: NBER

Volume ISBN: 0-87014-271-2

Volume URL: <http://www.nber.org/books/kend76-1>

Publication Date: 1976

Chapter Title: Appendix B: Total Investment and Stock Estimates, by Type and Sector: Sources and Methods

Chapter Author: John W. Kendrick

Chapter URL: <http://www.nber.org/chapters/c3811>

Chapter pages in book: (p. 164 - 229)

B

Total Investment and Stock Estimates, by Type and Sector: Sources and Methods

The methodology and sources underlying the estimates of the formation and stocks of total capital are already summarized in chapter 2. Appendix B contains a more detailed description of this material, as well as summary tables of our estimates for each year of the 1929–1969 period. Since the detailed notes on sources and methods are of interest mainly to technicians, they have been set on microfiche, and may be found in the back cover of this volume, together with the detailed basic sector tables. (See Table of Contents for material on microfiche.)

The thirty-two main summary tables—Tables B-1 through B-32—appear at the end of this introductory section. The first twelve comprise the investment estimates, and the remainder, the capital stock estimates. The gross estimates are always presented first, followed by the net estimates, each in terms of current and constant dollars. They cover the national economy totals, by sector, the domestic economy totals, by type, and breakdowns for tangible nonhuman investment and stock. (The comparable breakdowns within each of the sectors are on microfiche, as indicated in the List of Tables on pp. xvi–xix. Note that in these sector tables, investment estimates are shown in terms of the sectors financing the outlays, while the stock estimates are shown in terms of the sectors that “command,” or use, the capital.)

The last eight summary tables contain the variant capital estimates for the total private business economy. Since no adjustment is made to obtain the employed portion of tangible nonhuman capital, detailed tables for this item are unnecessary here.

Our notes on the sources and methods used in estimating the formation and stocks of total capital—gross and net, in current and constant dollars, by sector and major type—are divided into the following five major sections:

1. Tangible nonhuman investment and capital (B1).
2. Tangible human investment and capital (B2).
3. Intangible nonhuman investment and capital (B3).
4. Intangible human investment and capital (B4).
5. Stock variations and capital transfers (B5).

Note that Appendix B4, after some general remarks on the common methodology used in estimating the various types of human capital stock, is subdivided in turn into three sections: (a) education and training (B4a); (b) health and safety (B4b); and (c) human mobility (B4c).
