Chapter pages in book: (p. 209 - 229)

PART IV

CORPORATION CONTRIBUTIONS TO CHARITABLE ORGANIZATIONS RAISING FUNDS INDEPENDENTLY OF COMMUNITY CHESTS.

The large amount of money raised for charitable purposes by other forms of appeal than the community chest makes it important to submit data covering these non-chest charitable appeals. While community chests exist in nearly 325 cities and towns in the United States, in twenty-three cities of over 75,000 population, including New York, Chicago and Boston¹, the bulk of the charitable funds are raised by independent appeals. The importance of reliable data as to corporation contributions in these cities is apparent.

Furthermore, as pointed out in the introduction, community chests do not include all of the local welfare organizations which are dependent upon voluntary contributions and donations. It is important, then, to know how corporation contributions to these non-chest agencies compare with corporation contributions to the local community chest. In the hope of shedding additional light on the response which corporations make to community appeals and on the response they make to individual agency appeals, some data will be submitted in this section of the report showing corporation contributions to individual charitable institutions prior to their affiliation in a community chest.

Moreover, even those charitable organizations that participate in a community chest do not ordinarily rely upon it to raise funds for new buildings, or for extensions and improvements to plant, properly considered as "capital." Only a small fraction of the money raised for buildings is raised by community chests. As the number of such building fund appeals and the amounts subscribed to them during the last ten years are large, it seems advisable to include in this study such data as are available.

Finally, there are the current money raising efforts of the considerable group of national welfare organizations. In many of the fields of welfare work represented in community chests, national agencies exist whose primary concern is to maintain high standards

¹ For list of non-community chest cities as of January 1, 1930, see foot note, page 37.

of service on the part of local organizations, to promote inter-city co-operation and generally to strengthen their respective local movements. Most of these national organizations partake of the nature of loosely organized federations of local agencies, membership being on a voluntary basis. Some of these latter, however, have special powers and authority entitling them to exercise supervision over branch organizations in local communities. These national organizations draw their financial support partly from contributions and partly from membership fees paid by the affiliated local agencies.

Under the head of national organization appeals, special mention should be made of those of the American National Red Cross for the relief of disaster sufferers. Recent disaster funds for which data have been obtained are the Japanese earthquake, September, 1923, the Mississippi River flood, May, 1927, and the West Indies and Florida Hurricane, 1928. While the money to take care of disaster relief work is raised by the local Red Cross chapters, in the case of major disasters it is transmitted to the National Red Cross in Washington, which is responsible for the administration of the fund. Data as to corporation contributions to these disaster relief appeals will, therefore, be discussed in connection with national welfare organizations.

Non-Community Chest Cities

For reasons touched upon in the introduction, it has not been feasible for the National Bureau to do more than sample the experience of selected charitable organizations in the three largest non-community chest cities, New York, Chicago and Boston². In order to make a thorough-going study of corporation contributions to charitable organizations in these three cities, it would be necessary to canvass upwards of 2,000 separate institutions. In view of the impracticability of this, the National Bureau is obliged to content itself with submitting a small amount of data showing how much of total contributions to selected welfare organizations in those three cities in some one recent year came from incorporated business concerns.

New York—The best estimate of the total amount contributed to charitable work in New York City is that of the Bureau of Advice and Information of the New York Charity Organization Society.

² The so-called "Manufacturers' Chest" in operation in Cambridge, Mass., since 1917, will be discussed, as a unique method by which corporations have centralized contributions in a non-chest city.

According to a study published by that body approximately \$11,805,000 was raised in donations and contributions in 1923 by 353 charitable and welfare organizations carrying on work in Greater New York³. These 353 organizations together account for nearly 90 per cent of the money expended by 474 New York charitable and welfare agencies.

In order to get as representative a picture as possible of the experience of New York charitable and welfare organizations in respect to corporation contributions, annual reports and contribution lists of 32 organizations for the latest year available⁴ were analyzed. Names of contributors were carefully checked, in order to make sure that only incorporated businesses were included. The total amount shown by these 32 institutions (Table 60) as coming from cash donations and contributions was \$3,698,950. The total amount shown as contributed by corporations was \$185,320, or 5.0 per cent. The total number of corporation contributions was 3,090. However, one organization, the United Hospital Fund, accounted for \$96,187 or slightly more than half of the amount of the total corporation contributions, and for 1,249, or 40.4 per cent of the total number of corporation contributions. The purpose of the United Hospital Fund is to raise money to supplement the donations received directly by 56 New York hospitals. The campaign is an annual one, held in November, and a general canvass by means of volunteer "teams" is made of the business houses in various industries. The amount raised is later apportioned among the member hospitals giving free hospital service in Greater New York. The total amount raised by the 1927 campaign was \$714,751, of which corporations contributed 13.5 per cent.

It is significant that 15 New York hospitals received from corporations a much lower proportion of the contributions raised by their independent efforts, than the United Hospital Fund received in its joint appeal. These 15 institutions reported total cash donations and contributions in 1927 or 1928, of \$505,827. Of this amount, only \$14,941 or 3.0 per cent, is shown as contributed by incorporated business concerns. The total number of corporation contributions to these 15 hospitals was 522.

Two other welfare organizations (the New York Y.M.C.A. and the Brooklyn and Queens Y.M.C.A.) account for \$50,365 of the total

³ "The Finances of New York's Social Work." New York Charity Organization Society, 1925.

⁴ In some instances 1928, in others 1927.

corporation contributions shown by 32 New York organizations. The New York Y.M.C.A. reports donations and contributions for 1926 of \$398,022, of which \$35,817 or 9.0 per cent, was contributed by 355 corporations. The Brooklyn and Queens Y.M.C.A. reports total donations and contributions for 1928, amounting to \$225,546, of which \$14,548, or 6.5 per cent was contributed by 218 corporations. The two Y.M.C.A.'s account for 27.2 per cent of all of the corporation contributions shown by 32 institutions.

The other 14 charitable and welfare institutions show donations and contributions for 1927 or 1928, amounting to \$1,854,804. The amount shown as coming to them from corporations was \$23,827 or slightly less than one per cent. The total number of corporation contributions reported by these 14 organizations was 746.

Besides the 32 charitable and welfare organizations whose contributions were analyzed for some one year, there were 14 other organizations whose printed lists of contributors either showed no corporation contributions, or which stated specifically, when inquiry was made, that they received no contribution from incorporated business concerns. The total amount raised in contributions by these fourteen organizations (in some cases 1927, in others 1928) was \$1,365,000. Eight hospitals are among them. In addition to the foregoing organizations, there are two which make combined appeals for their affiliated organizations. One of these, the Catholic Charities of the Archdiocese of New York, makes a combined special appeal once a year for donations for the support of 209 Catholic institutions. For the year 1927, the amount raised was approximately \$1,055,000. The National Bureau has been informed that no organized effort is made by the Catholic Charities to obtain donations from corporations, the appeal being addressed to individual communicants of the Roman Catholic Church throughout the Archdiocese of New York. Those in charge of the Catholic Charities of the Archdiocese of New York state that its activities are directed more toward the coordination of the work of the Catholic social welfare organizations than toward central financing. The other is the Federation for the Support of Jewish Philanthropic Societies in New York City, which distributed in 1929 to its 91 affiliated societies \$5,006,892. This Federation makes no appeal to corporations, although it is possible that in the list of donations some contributions made in the name of Jewish corporations would appear.

Chicago—According to a study made by the Chicago Council of Social Agencies, the amount raised in donations and voluntary

TABLE 61

SUMMARY OF ALL CONTRIBUTIONS AND OF CORPORATION CONTRIBUTIONS TO CURRENT EXPENSE BUDGETS OF EIGHT SELECTED CHARITABLE AND WELFARE ORGANIZATIONS, CHICAGO, 1928.

Organization	Total amount of contributions	Amount of corporation contributions	Per cent of total amount of contributions from corporations	Number of corporation contributions
United Charities.....	\$489,264	\$116,179.	23.7	925
Travelers Aid Society.....	58,184	10,535	18.2	121
Committee of Fifteen.....	23,469	3,035	12.9	25
Infant Welfare Society.....	170,177	12,651	7.4	176
Boy Scouts.....	172,449	43,147	25.0	461
Central Howard Association.....	15,773	2,728	17.3	185
Juvenile Protective Association....	33,268	1,600	4.8	31
Immigrants Protective League....	13,928	1,870	13.4	26
Total.....	\$976,512	\$191,795	19.6

contributions, for the year 1922, including membership dues considered as contributions, by 232 charitable and welfare organizations was \$6,015,000. These organizations carry on the same type of work as those participating in the 129 community chests for which data are presented in Parts II and III.

Unfortunately it has been possible for the National Bureau to obtain data as to corporation contributions from only eight Chicago charitable organizations. Together, they account for \$976,512, or 16.2 per cent of the estimated total for 232 organizations. The amount raised by each organization in donations and contributions for 1928 and the amount and number of corporation contributions are shown in Table 61.

The proportions from corporations reported by the United Charities, the Travelers' Aid Society and the Boy Scouts compare favorably with the percentages received from corporation contributions shown by community chests. It is significant to compare the relatively high per cent of corporation support shown by the United Charities of Chicago with the information given by the Charity Organization Society of New York to the National Bureau's investigators, that no contributions are received from corporations in Greater New York, and none are sought. The Association for Improving the Condition of the Poor in New York, as shown by Table 60, received approximately 1.5 per cent of its total donations

TABLE 62

in 1927 from corporations and the Association for Improving the Condition of the Poor of Brooklyn, one-tenth of one per cent. All four organizations give service in the same field of social work, viz., family welfare and relief.

Boston—According to a study made by the Boston Chamber of Commerce, the amount raised in donations and contributions by 255 Boston charitable and welfare organizations for the year 1922 was approximately \$4,000,000.

The National Bureau has been able to obtain data as to corporation contributions for at least one year, to fourteen organizations whose total contributions for one year amount to \$1,144,887. This is approximately 28.6 per cent of the total mentioned above. The amount received from corporations by these 14 organizations for the year indicated was \$71,040, or 6.2 per cent of their total contributions. Table 62 summarizes corporation contributions to these 14 organizations for 1928.

The organizations showing the highest proportions of total contributions received from corporations are the Y.W.C.A. with 12.7 per cent and the Y.M.C.A. with 12.5 per cent. The percentages for the other Boston organizations studied, arranged in order, are as follows:—

Cambridge, Mass.—So far as the National Bureau knows, Cambridge is unique in the method used for centralizing contributions from Cambridge industrial and financial concerns to local charitable and welfare organizations. Cambridge has what is known as the Manufacturers' Chest. It is described as "a fund contributed annually by the industries of Cambridge for distribution to the welfare organizations of the city." Thirty-four corporations are represented in the general committee. The Manufacturers' Chest was started in 1917. Figures are not made public of the amounts distributed by it to each Cambridge charitable organization. Each charitable agency is requested to submit a budget of its past and prospective income and expenditures to a committee of the Chest. Appropriations are based on the committee's best judgment of the organization's relative need and importance to the community. Organizations which will not submit a financial report do not receive aid from the Manufacturers' Chest. The total amounts distributed by the Chest in each of the years 1917-1928, are shown in Table 63.

From data gathered by a field agent of the National Bureau, it appears that 14 charitable and welfare organizations were granted funds from the Manufacturers' Chest in 1928. The total amount of

TABLE 63

AMOUNTS DISBURSED BY CAMBRIDGE MANUFACTURERS' CHEST TO CAMBRIDGE CHARITABLE ORGANIZATIONS, 1917-1928, INCLUSIVE.

Year	Amount	Year	Amount
1917	\$ 8,855	1923	\$ 13,125
1918	10,460	1924	17,785
1919	11,395	1925	24,950
1920	12,255	1926	28,190
1921	10,500	1927	31,500
1922	12,492	1928	31,195

all donations and contributions raised by these 14 Cambridge organizations for 1928, was \$140,834. The \$31,195 disbursed by the Manufacturers' Chest to Cambridge charitable organizations in 1928, represents approximately 22.3 per cent of the total contributions reported by all Cambridge charities. No figures are published of the amounts contributed to the Manufacturers' Chest by individual Cambridge corporations.

Welfare Organizations in Community Chest Cities But Not Participating in Community Chest

Table 64 summarizes data as to corporation contributions to non-community chest charitable appeals in selected community chest cities since 1919. In some instances the data refer to money raised by individual organizations prior to the organization of the local community chest. In other instances the data relate to charitable agencies that remained outside the local community chest after its organization.

Attention is especially directed to the data relating to Y.M.C.A. appeals made independently of community chests. These appeals were for current operating funds, not for building funds, corporation contributions to which will be discussed in the following section. The relatively high percentage of Y.M.C.A. current donations coming from incorporated business concerns as compared with those corporation contributions to other charitable and welfare agencies, is noteworthy and can largely be attributed to the early development and continued use by that organization of the technique of solicitation now generally used by community chests. In a majority of cases the per cent of corporation contributions shown by local Y.M.C.A.'s

raising funds outside the chest exceed the per cent of corporation contributions shown by the local community chest. The relatively small per cent of corporation support obtained by other non-chest organizations is another outstanding fact shown by Table 64.

Jewish Welfare Federations

These organizations raise funds for the Jewish charitable and welfare work in approximately 39 cities with over 75,000 population. In several of these, however, the Jewish Welfare Federation is one of the constituent members of the community chest and therefore receives funds for the expense budgets of its own affiliated organizations from the community chest. In the other cities the appeal of the Jewish Federation for its member organizations is made by means of an annual, intensively organized appeal, similar in most respects to the community chest campaign.

At the request of the National Bureau, the Bureau of Jewish Social Research (New York) made an inquiry among a number of the larger Jewish Federations in order to find out the extent to which they have asked for or received corporation contributions. As mentioned earlier, the Federation for the Support of Jewish Philanthropies in New York states specifically that no organized appeal is made to corporations for contributions, the emphasis being put upon personal support. The Associated Jewish Charities of Baltimore reported a small amount of contributions from corporations but makes no active appeal for contributions to non-Jewish concerns. The Federations in the cities of Brooklyn, Boston, Milwaukee, Pittsburgh, Atlantic City, Los Angeles, Chicago, St. Louis, San Antonio, Indianapolis, Detroit and Seattle, reported no organized appeal to corporations.

Building Funds

Table 65 which follows shows the amount, per cent, and number of corporation contributions to funds for buildings, raised by individual organizations by special appeals. To facilitate comparison with corporation contributions to community chests the per cent of total contributions to the latter for the same year as the one in which the particular building fund was raised, is also shown in this table.

No general statement can be made concerning the proportion of support for building funds which came from corporations. In the case of the Y.M.C.A. building funds studied, the proportion of the total contributed by corporations ranges from 47.7 per cent in the

NON-COMMUNITY CHEST APPEALS

case of Canton in 1926 to 1.4 per cent in the case of Brooklyn, in 1929. The community chest cities show a wide range in the percentages of total Y.M.C.A. building fund contributions received from corporations.

In the case of the Y.W.C.A. building funds the proportion of the total support received from corporations varies from 37.4 per cent in St. Louis to zero in Scranton. For hospitals the percentages range from 53.6 in the case of a campaign conducted in both St. Paul and Minneapolis to zero in Scranton.

There is no striking relationship present between the per cent of corporation contributions to building funds and the per cent of corporation contributions to the community chest in each city in the

same year. It may be noted, however, that the proportion of the total contributions received from corporations was greater in the case of the chests than in the case of the building funds with the exception of two Y.M.C.A. building fund appeals (Schenectady and Canton), two Y.W.C.A. appeals (Flint and Minneapolis), two hospital appeals (Harrisburg and Reading, 1925), and the American Legion Endowment Fund in St. Paul.

National Social Work Organizations, Current Expense Budgets

Thirty-one national social work organizations replied to an inquiry from the National Bureau as to whether they received any contributions from corporations. Their names are given below⁵. Only 3 reported any corporation contributions. In all these cases, corporation support was on a small scale. The peculiar position of the national social work organizations as to contributions explains perhaps why they receive very few contributions from corporations. While the great majority of these national social work organizations have their headquarters in New York City, they are no more closely related to New York as a community than to hundreds of other American cities in which welfare work is being carried on by their affiliated organizations. Few of the national social work organizations make what could be termed a community-wide appeal for funds. As already indicated, they depend for a considerable share of their budget on the membership contributions of local organizations operating in their field of work. The remainder of their contributions come from individuals and philanthropic foundations.

National Social Work Organizations, American Red Cross Disaster Relief Appeals

When a disaster occurs one of the first measures after dispatching Red Cross relief units to the scene is to raise the fund out of which the expenses for disaster relief will be met. The current expense budget of the American National Red Cross in Washington is chiefly met by contributions from the local Red Cross chapters. Where these chapters participate in community chests it is customary to include in the budget of the local chapter a contribution for the support of the national headquarters expense. Where a local chapter does not participate in a community chest, a certain proportion of the annual "roll call" fund is transmitted by the local chapter to Red Cross headquarters in Washington as the local community's share of the national expense. Obviously the current operating budget of the American National Red Cross cannot take care of the heavy financial demands which disasters make on the organization.

The total amount of the national disaster relief fund is usually fixed by the Executive Committee of the National Red Cross, and "quotas" or local shares immediately assigned to Red Cross chapters.

With a view to learning the extent to which corporations respond to these disaster relief appeals, the Bureau has collected some data in a number of cities as to the three major disaster relief funds mentioned earlier.

Japanese Earthquake—The Japanese earthquake occurred on September 2, 1923. The American Red Cross immediately cabled offers of assistance, and President Coolidge issued an appeal to the American public for contributions. At once, according to news items published in the New York Times, many donations of merchandise and some of cash, began coming in from corporations. A large shoe manufacturing concern in New York state donated 16,000 pairs of shoes, and later made a cash contribution of \$10,000. A leading import and export company engaged in the Far Eastern trade contributed \$10,000. A company manufacturing food products promptly released to the Japanese government, without cost, \$5,000 worth of edible oils stored in Japan and China. A leading oil refining company, in addition to making a cash contribution of \$30,000 despatched two steamers from Shanghai, loaded with food, water, clothing, and medical supplies. Transcontinental railroads not only made cash contributions, but transported relief merchandise free of charge. Cash contributions from New York savings banks were

*No data submitted by chest for 1924.

reported. On September 12, according to a news despatch published in the New York Times from Albany, such contributions were authorized in an opinion given by the Attorney General of the State, at the request of the State Superintendent of Banks. The Attorney General held that the scope of an amendment to the General Corporation Law, enacted by the 1922 session of the State Legislature, permitting certain corporations to make expenditures for "social and economic betterment" was sufficiently broad to justify contributions to the Red Cross fund by savings banks.

The total raised for Japanese relief was \$10,448,702. Table 66

its next regular annual appeal is also shown. In six cities out of fourteen in which a comparison is possible, the proportion of contributions from corporations to the Japanese earthquake appeal was greater than to the community chest.

Mississippi River Flood—The full magnitude of this disaster was not at first appreciated. The first appeal of the American Red Cross on April 22, 1927 was for \$5,000,000. On May 2, this was

increased to \$10,000,000. The total finally raised was \$17,498,902. The great bulk of the fund consisted of contributions made through 3,420 chapters of the American Red Cross⁶. Figures as to corporation contributions have been gathered in a number of cities. In a few instances, the original contribution lists of the local Red Cross chapter have been the source of data; in most cases, however, it has been necessary to resort to the local newspapers. Needless to say, the lists published in newspapers are not complete, and usually include only the larger contributions. Table 67 summarizes data the National Bureau has gathered. Corporations contributed a larger proportion of the funds for the Mississippi River flood appeal than to the community chest in five cities out of thirty-one in which a comparison is possible.

West Indies Hurricane—The amount which the National Red Cross sought to raise for this disaster which occurred in September, 1928, was \$5,000,000. The amount actually obtained was \$5,933,725.

Table 68 summarizes data gathered in a number of cities as to corporation contributions. As in the case of the Japanese and Mississippi relief funds, the amounts set down opposite the names of the different cities are probably not the totals contributed by all corporations. Where the information was taken from newspapers, it is probable that only larger contributions were recorded. In eight cities out of twenty-seven in which a comparison is possible, the proportion of all contributions coming from corporations for the West Indies Hurricane appeal was greater than for the community chest.

SUMMARY.

The rather limited view of corporation support of charitable organizations not participating in community chests which has been presented in the foregoing pages reveals that in most instances a smaller proportion of the total contributions to non-community chest charitable agencies is contributed by corporations than is the case when similar organizations participate in community chests. This is true whether the appeal by the non-participating organizations be for current expenses or for capital funds.

Of all the welfare organizations raising funds independently of community chests, the Y. M. C. A. has been the most successful in

⁶"Mississippi Valley Flood Disaster of 1927." American National Red Cross, Washington, D. C., Oct. 1929.

getting corporation contributions. This is probably due to the nature of the program carried on by the Y. M. C. A., which in many cities includes classes and groups for workers in industrial establishments. It is perhaps also due to the participation on Y. M. C. A. boards of leading local industrialists, who are heads of corporations. Perhaps most of all, however, the success of the Y.M.C.A. as compared with other organizations is due to the fact that, as already indicated, it has had for years an especially well developed technique for raising funds. This technique brought the industrial corporation into a position where its relation to the work of the Y.M.C.A. was made more apparent.⁷

National organizations other than the American Red Cross are shown to have raised an insignificant fraction of their funds from corporations.

While the disaster appeals of the American Red Cross received generous corporation support in many cities, it appears that in general corporations contributed a larger proportion of the funds raised by community chests than of the funds raised by disaster appeals in the same cities.

⁷ See discussion as to Y.M.C.A., Part I, pp. 48-57.
