Subject Index

- Activities of daily living (ADL), 255; in analysis of nursing home stay, 262–63; classification according to, 276–77; effect of severe impairment in, 17, 266, 268; Medicaid payments for different levels in, 277–78
- Activities of Daily Living (ADL) Index, 279, 295
- ADEA. See Age Discrimination in Employment Act
- ADL. See Activities of daily living
- Age of children, as factor in time provided to elderly parents, 9, 128. See also Elderly
- Age Discrimination in Employment Act (ADEA), 59
- Aging issues, developed and less developed countries, 11-14, 164-65
- Altruism, 111, 203-6
- Applied Management Sciences, Inc., 276
- Baby boom generation, Japan: effect of actuarially fair pension system on, 243; effect of fully funded pension system on, 15, 224–25, 243; effect of pay-as-you-go pension system on 14–15, 222, 243; effect on national saving in Japan, 217, 219; effect on pension system, 207, 211, 221
- Bequest motive: for saving, 10, 135–39; strategic use of, 133; test for presence of, 139–40, 158–59
- Birth rate, Japan, 210
- Bonds: as investment for pension accumula-

tion, 4–5, 61–63, 66–69, 72, 75–76; relative performance of, 75–78

Budget surplus effect, Japan, 15, 220-22, 224

Channeling Demonstration. See National Long-term Care (Channeling) Demonstration

- Children: financial transfers by parents to, 111, 123, 133; financial transfers to elderly by, 7–9, 109–11, 123, 131; time transfers to elderly by, 7–9, 109–11, 128–29, 131. See also Household surveys, Thailand and Côte d'Ivoire; Living standards, Thailand and Côte d'Ivoire
- Cliff vesting, 52
- Consumer Expenditure Survey (CES), 150
- Consumption: changes with age, 150–58, 160–62; life-cycle patterns of, 139–59; marital status as factor in, 159, 162; patterns of couples vs. individual, 162
- Consumption-tracks-income model (of saving behavior), 202-3
- Data sources and characteristics: for analysis of living arrangements, 87; for analysis of nursing home use, 16, 254–57; of consumption (RHS), 140–41, 148–50; for earnings profiles, 64–66; for family support analysis, 8, 114–17; for lifecycle consumption, 9–10, 135–36; for Markov specification tests, 276–77; for pension wealth analysis, 62–64; for pro-

- Data sources and characteristics (*continued*) vision of time analysis, 110, 114–17; for Thailand and Côte d'Ivoire analyses, 166–67, 171–74, 198; for three models of retirement, 23–24
- Defined benefit pension plan, Fortune 500 firms, 23-24
- Demographic changes, Japan, 210-11
- Departure rates, retirement, 37-42, 44, 48-49, 57-60
- Discrete choice problem: components of, 79– 81; in living arrangement decision, 6; structure of, 81–84. *See also* Independence of irrelevant alternatives (IIA); Likelihood functions; Simulated maximum likelihood (SML)
- Dissaving behavior of elderly, 10, 135, 138-39; estimating, 139
- Dynamic programming model (of retirement), 2–3, 22, 28–32; parameter estimates using, 35–37
- Dynasty model (of saving behavior), 202-6
- Early retirement. See Departure rates, retirement; Pension plans; Retirement decisions; Window plan (for early retirement)
- Educational standards, Thailand and Côte d'Ivoire, 179-80, 182
- Elderly: children's time spent with, 7–9, 109, 128–29; financial transfers by children to, 7–9, 109–11; income levels among, 8, 109; increase in Japan of, 210–11; poverty rates of, 8, 109; status in developed and less developed countries, 165–6. See also Labor supply and time provision structural models; Labor supply and time provision Tobit model
- Employment factor, family support analysis, 122
- Exits, nursing home: differences in, 273; modes of, 16, 265-68

Food consumption data, 140-50

- Gender factor: with severe impairment in ADL, 266, 268; in time provision to elderly, 9, 122, 128
- Generalized extreme-value (GEV) distributions, 82
- Goals attainment model (of retirement), 60

HAAP. See High-average-age period

- Hazard model of retirement, 33, 36
- Hazard rates: as departure rates, 37-42; for different payment methods, 264-65; mortality, 136, 139-40; plots of, 258
- Health insurance. See Insurance, government health; Insurance, private; Insurers (health insurance); Medicaid; Medicare
- Health status: in consumption model with bequest motive, 161–62; in Côte d'Ivoire, 181–82; data in HRCA survey for, 88–89; as factor in support for elderly, 8–9, 122, 128; Markov model tests of reimbursement effect on, 278–94
- Hebrew Rehabilitation Center for the Aged (HRCA) survey, 8, 87, 110, 114–15, 131
- Heterogeneity (Markov model): controlling for, 283, 285-89; effect of uncontrolled, 289-92
- High-average-age period (HAAP), 14, 207-9
- Homogeneity (Markov model null hypothesis), 283, 285-89
- Hospital care demand, 273

Households: income and consumption in Côte d'Ivoire, 191–92, 194–96, 199–201, 204–6; income and consumption in Thailand, 196–201, 204

- Household surveys, Thailand and Côte d'Ivoire, 166-67, 171-74
- HRCA. See Hebrew Rehabilitation Center for the Aged (HRCA) survey
- HRC-NBER Child Survey, 8, 114-15, 131
- IIA. See Independence of irrelevant alternatives
- Income: effect on decisions of elderly, 109– 110; as factor in time provision to elderly, 129; measurement in Thailand and Côte d'Ivoire of, 184, 186–91, 192, 194
- Income redistribution, 211–12. See also Transfers, intergenerational
- Independence of irrelevant alternatives (IIA) assumption, 6, 79–83, 92, 94–100, 105–6; in discrete choice model, 80–81; of intra- and intertemporal correlation, 6, 79–80
- Inheritance, 10. See also Bequest motive
- Insurance, government health, 251
- Insurance, private: hazard rates for, 265; for long-term care, 15; model of financing by, 260; for nursing home use and exit probabilities, 17; patients compared to

Medicaid and Medicare patients, 272– 73; as source of nursing home payments, 251, 254–55

Insurers (health insurance), risk averse position of, 251

Intertemporal linkages: components of living arrangement, 80; in living arrangement decision, 6-7, 82-84

Intertemporal specifications, living arrangements model, 5-6, 92, 94-96

Investment: pension accumulation strategies for, 4-5, 61-62; relation to savings of, 247

Labor force participation, Thailand and Côte d'Ivoire, 180-81

Labor market distortion, 14, 207, 212-13

Labor supply and time provision structural model, 111-14, 124-25, 127-30, 134

Labor supply and time provision Tobit model, 117-24, 128-34

LCH. See life-cycle hypothesis (LCH) of consumption

- LDCs. See Less developed countries
- Lerman-Mansky frequency simulator, 87

Less developed countries (LDCs), 11-14

Life cycle, household (Thailand and Côte d'Ivoire), 13-14, 180, 191-98

Life-cycle hypothesis (LCH) of consumption, 9–10, 135; with bequest motive in, 135– 36, 139, 156–58, 161; original specification of, 136–38, 160, 162; predictions of, 10; without bequest motive, 137

Life-cycle model: for analysis of Japanese pay-as-you-go pension system, 213–16; of saving, 13, 202–3

Life expectancy, less developed and industrialized countries, 164-65

Likelihood, maximum. See Likelihood functions; Simulated maximum likelihood (SML)

Likelihood functions; in discrete choice problem, 84-87; in labor supply and time provision structural model, 124-25; in labor supply and time provision Tobit model, 118; simulations to estimate, 81, 84-87, 92-103

Liquidation bond, 241-43

Living arrangements: categories and sequences of, 90-93; decision for, 79-80; as discrete choice problem, 106-7; effect of health, income, and marital status on decision for, 6-7, 80, 88-90, 97, 100, 102; of elderly, 109-10; inter- and intratemporal correlation assumptions for, 5-6, 79-80; in Thailand and Côte d'Ivoire, 174, 176, 179, 183-84, 191, 199. See also Discrete choice problem; Likelihood functions; Simulated maximum likelihood (SML) estimation

Living arrangements model, 92, 94-96

Living standards, Thailand and Côte d'Ivoire, 182-91, 199

Long-term care: components of, 251; estimates of insurance effects on, 16–17; insurers' offering and financing for, 15; measurement of need for, 252; Medicaid as insurer for, 253. See also Nursing home care

Marital status: consumption patterns related to, 159, 162; as factor in family support for elderly, 9, 121–22, 128; polygyny as form of, 174, 176, 179

Markov assumption test, 293-94

Markov model: assumptions of simple, 18– 19; first-order and second-order tests, 278–94; specifications tests for simple, 275–76; test of measurement errors in, 294–99. See also Heterogeneity (Markov model); Homogeneity (Markov model null hypothesis)

Medicaid: duration of stay and exit probabilities with, 17, 268; hazard rates for, 265; limits to and variability of eligibility for, 252–53, 273; model of financing by, 260; as source of nursing home payments, 251–55, 277–78, 301. See also Insurance, government health

Medicaid patients, 272-73

Medicare: conditions for payments by, 252– 54; duration of stay and exit probabilities with, 17, 268; hazard rates for, 265, 269; model of financing by, 260; Prospective Payment System, 254; as source of nursing home payment, 251, 255. See also Insurance, government health

Medicare Catastrophe Act (repealed), 252

Medicare patients, 272-73

Men: educational levels (Thailand and Côte d'Ivoire), 180; income levels by age (Thailand), 187–91; labor force participation (Thailand and Côte d'Ivoire), 180–81

- MNL model. See Multinominal logit (MNL) model
- MNP model. See Multinominal probit (MNP) model
- Moral hazard: insurers' vulnerability to, 251– 52, 272; in long-term care, 15, 252. See also Hazard model of retirement; Hazard rates
- Mortality rate, Japan, 210
- Multinomial logit (MNL) model, 82. See also Nested multinomial logit (NMNL) model
- Multinomial probit (MNP) model, 81–84, 92, 94–100, 102, 104–6. See also Panel multinomial probit (PMNP) model
- National Center for Health Services Research (NCHSR), 19, 276
- National Longitudinal Survey (NLS), 138
- National Long-Term Care (Channeling) Demonstration, 17, 250, 254-55, 270
- National Nursing Home Survey (1977), 270
- NCHSR. See National Center for Health Services Research
- Nested multinomial logit (NMNL) model, 82
- NLS. See National Longitudinal Survey
- NMNL model. See Nested multinomial logit (NMNL) model
- Nursing home care: analyzing demand for, 273; differences in duration of, 16, 253– 54, 257, 269; estimates of duration, 258–59; lack of price estimates for, 273; measurement of use of, 250; for Medicaid patients, 277; methods of financing, 251–54; mode-of-exit estimates, 16, 265–68; price variation in, 249, 253
- Nursing homes: incentive payments to, 277– 78; link between financing and exit modes of, 250, 257, 259–68
- Options value model (of retirement), simplified. See Goals attainment model (of retirement)
- Option value model (of retirement), 2–3, 22, 24–29, 59–60; compared with dynamic programming model, 37–42; parameter estimates using, 35–37, 59; predictive validity of, 38–39; results of analysis using, 32–33, 58–59
- Panel multinomial probit (PMNP) model, 104, 106
- Pension accumulation: calculations for, 62– 64, 66–68; life-cycle profiles for analy-

sis of, 64–66; stock or bond investment strategies for, 66–68; strategies for, 4–5, 61–62; TIAA-CREF participant allocations for, 72–74

Pension annuity value, 61-62

- Pension bond, 239, 243. See also Social security bond
- Pension Fund, hypothetical: functioning of, 236–38, 243; funding of, 238–39, 243; government involvement with, 230, 236 use of pension bond for, 239–41. See also Liquidation bond; Pension bond; Pension wealth; Social security bond
- Pension plans, firm, 49–54, 59. See also Defined benefit pension plan; Departure rates, retirement; Window plan (for early retirement)
- Pension wealth, 4-5, 66-68, 74-78. See also Bonds; Stocks
- PMNP model. See Panel multinomial probit (PMNP) model.
- Political forces, Japan, 212
- Polygyny, 174, 176, 179, 191
- Poverty rates of elderly, 8, 109
- Price variation, nursing homes, 249, 253, 273

Probit model (of retirement), 2–3, 22, 27–28, 58; parameter estimates using, 33–34, 36; results with forward-looking variables, 43–45

Public pension system, Japan: with actuarial fairness, 14-15, 220-23, 225-26, 242-43; components and financing of, 209-10; contributions to, as tax, 212-13; creation of budget surplus and deficit, 220-22; effect of high-average-age period for, 14, 207; fully funded method, 15, 213, 217, 220-25; fully funded system with actuarial fairness, 226-28; government perception of contributions to, 229-30; hypothetical implementation of reform for, 223-29; pay-as-you-go method for, 14-15, 207-8, 210-13, 217-19, 222; pay-as-you-go system with actuarial fairness, 225-26; problems of, 207-8; proposed reform plans for, 208; unfunded, actuarially fair, 15. See also Baby boom generation, Japan.

Quit rates. See Departure rates

Retirement decisions: departure rates used to compare models for, 37-42; early, with and without Social Security, 45-47; effect of firm pension plan provisions on, 49–54; estimating predictions of, 60; three models to approximate rules for, 2– 3, 22–24, 27–49, 57–60. *See also* Dynamic programming model; Goals attainment model; Option value model; Probit model
