"Politicians, journalists, scholars, and bureaucrats should declare a moratorium on further discussion of reform of the federal bureaucracy until they've all sat down for a few hours and read this important book. Indeed, if all Americans were to read it, we might have a grand, national 'aha' experience about the problem of bureaucracy. We might begin to understand the dynamic, interwoven interests which have collaborated for over one hundred years to create the current rigid, rule-bound system which dismays so many citizens. If you care about the quality of the American government, read it!"

—Constance Horner, President Reagan's director of the U.S. Office of Personnel Management, and President Bush's Deputy Secretary of Health and Human Services

"Ronald N. Johnson and Gary D. Libecap have written the most analytic history of the federal civil service. On the way, they find that casual assumptions about the federal bureaucracy are not consistent with the evidence. Their central insight is that the civil service was created and is sustained by both Congress and the president, Democrats and Republicans, primarily to prevent any single group from gaining undue control. This insight is the reason for Johnson and Libecap's pessimism about the prospects for changes that would make the civil service more responsive and productive."

—William A. Niskanen, chairman, Cato Institute

"This book is much more than a descriptive account of the evolution of the civil service—it is a study of the economics and politics of institutional change. Employing the tools of transaction cost analysis and the New Institutional Economics, this volume provides us with an analytical understanding of the development of bureaucracy. In addition, it illustrates the power of these analytic tools for improving our understanding of the performance characteristics of economies."

—Douglass C. North, Washington University, co-winner of the 1993 Nobel Prize in Economics

RONALD N. JOHNSON is professor of economics at Montana State University, Bozeman. GARY D. LIBECAP is professor of economics at the University of Arizona and a research associate at the National Bureau of Economic Research.
