
Subject Index

- Aciphex, 231
- ACNielsen, 40, 279; classification systems and, 158–60
- ACNielsen ScanTrack, 22; classification of ice cream, 23; Geomean indexes for, 30; Laspeyres indexes for, 30; number of product characteristics in, 27–28
- Acquisition theory, 151–52
- Aggregation, 30–34, 49, 379–80; cost-of-living index theory and, 153–54; scanner data for formulas, 83–84
- Amalgamation, scanner indexes and, 45
- Annual Törnqvist index. *See* Törnqvist indexes
- Average prices, 49
- Axid, 230–34, 246
- Bar codes, 1
- Branded products: advertising costs for, 180–81; consumer promotions for, 182–83; empirical findings for markup ratios of, 188–200; markups of, 166–67; physical quality of, vs. private labels, 174–77; production methods, scale, factor prices for, 177–79; research and development for, 180; trade promotions for, 182. *See also* Prescription (Rx) drugs; Private-label products
- Breakfast cereals. *See* Cereals
- Bureau of Economic Analysis (BEA), 4; classification systems and, 158–60
- Bureau of Labor Statistics (BLS), 3, 5, 7, 39; missing prices and, 349–50
- Canadian Consumer Price Index, 154; for televisions, 89, 90–95. *See also* Consumer Price Index (CPI, US); Retail Price Index (RPI, UK)
- Cereals: price indexes for, 366–74; scanner data set for, 356–66; Törnqvist indexes for, 366–74
- Chained matched indexes, 285–86
- Chain-weighted indexes, 4
- Churning, 51
- Cimetidine, 246n26, 249–51
- Classification of Individual Consumption by Purpose (COICOP), 160
- Classification systems, 158–60
- COICOP (Classification of Individual Consumption by Purpose), 160
- COLI theory. *See* Cost-of-living index (COLI) theory
- Collection costs, 103
- Consumer behavior, model of, 125–30
- Consumer demand, model, 124
- Consumer Expenditure Survey (CEX), 4
- Consumer Price Index (CPI, US), 4, 19; benefits of scanner data for, 40; calculation of, 41; classification systems and, 158–60; formula for, 52–53; producing, 39; quality adjustments and, 119–20; using scanner data for improving, 19–

- Consumer Price Index (CPI, US) (*cont.*)
20, 25–28. *See also* Canadian Consumer Price Index; Retail Price Index (RPI, UK)
- Consumer promotions, for private labels vs. branded products, 182–83
- Consumption behavior, 151–52
- Continuous time data, scanner data and, 3–4
- Cost-of-living index (COLI) theory: aggregation and, 153–54; scanner data and, 151–53
- Cost-of-living indexes, 147–48, 278; types of households and, 157–58
- Cost weights, 53
- CPI. *See* Canadian Consumer Price Index; Consumer Price Index (CPI, US)
- Data cleaning, 46
- Data records, electronic. *See* Scanner data
- Direct adjustment procedures, 25
- Dominick's Finer Food (DFF), 183–84
- Dummy variable hedonic regressions, 331–34
- Durable goods, 151–52
- Electronic data records. *See* Scanner data
- Electronic point-of-sale (POS) systems, 17, 71
- Eli Lilly, 230–34
- Exact hedonic indexes, 282–84, 339–41; scanner data for washing machines and, 298–302; for washing machines, 293–96
- Expenditure data, lag in, 4
- Explicit imputation, of missing prices, 350
- First-mover advantages, 233, 233n8
- Fisher indexes, 21, 30
- Formulas: for annual Törnqvist indexes, 54; for Consumer Price Index, 52–53; for Geomean indexes, 53–54; for Geometric indexes, 134; for Laseyres indexes, 4, 41, 54–55, 133–34; for monthly Törnqvist indexes, 54; for price indexes, 133–35; for Retail Price Index, 3–84; for Sato-Vartia indexes, 55; for Törnqvist indexes, 134–35
- Generalized Axiom of Revealed Preference (GARP), 380–81
- Generic drugs, 254–60. *See also* Private-label products
- Generic firms, 235n13
- Geomean indexes, 30, 124; advantages of, 32; formula for, 53–54; results for, 55–62
- Geometric indexes: calculation of, 135–38; formula for, 134
- GfK Marketing Services, 279
- Glaxo, 230–34
- Habit purchaser households, 155–56
- Harmonized Indices of Consumer Prices (HICP), 290–91
- Hedonic adjustment procedures, 25–27, 120; direct vs. exact, 289
- Hedonic indexes: exact, 282–84, 293–96, 339–41; vs. matched indexes, 287–89
- Hedonic regression, 278, 319–20; changing tastes and, 341–46; dummy variable, 331–34; flexibility issues and, 329–31; functional forms of, 326–29; problem of package size and, 328–29; quantity weights and, 337–39; theory, 321–26
- HICP (Harmonized Indices of Consumer Prices), 290–91
- Histamine₂-receptor antagonists (H₂s): history of, 230–34; marketing intensity near patent expiration of, 244–46; prescription markets for, 240–42; price index implementation procedures, 234–40; pricing of, near patent expiration, 246–49. *See also* Zantac
- Households, types of shopping behaviors of, 155–57
- Household scanner data, 111
- Ice cream: ACNielsen's classification of, 23; Bureau of Labor Statistic's classification of, 23; category item characteristics, 35–37; as item stratum in CPI, 28–30; price measurement of, 7
- Ideal markups, 226–28
- Implicit imputation, of missing prices, 350
- Imputation of missing prices, 350; Bureau of Labor Statistics method of, 351–52; carry-forward approach to, 352–53; economic approach to, 353–56, 374–80; unit values method of, 351
- Indexes. *See* Price Indexes
- Information Resources, 40
- Interspatial price comparisons, 33
- Inventory behavior, for canned tuna, 138–44
- Inventory shoppers, 157

- Lag, in availability of expenditure data, 4–5
- Laspeyres formula, 4, 41
- Laspeyres indexes, 30, 124; calculation of, 135–38; formula for, 54–55, 133–34; results for, 55–62
- Linear model, of hedonic regression, 327
- Log-log model, of hedonic regression, 326
- Manufacturer's cost adjustment procedures, 25
- Marginal costs, 165; inferring, from private labels, 168–73; of private-label vs. branded products, 166–67
- Markups, 165; empirical findings of, for branded vs. private-label products, 188–200; estimating, 166; ideal, 226–28; inferring, from private labels, 168–73; of private-label vs. branded products, 166–67; ratios for, with scanner data, 186
- Matched indexes: chained, 285–86; vs. exact hedonic indexes, 287–89
- Matching process, 284–87; scanner data for washing machines and, 298–302; for washing machines, 296–97
- Merck, 230–34
- Missing data, 381
- Missing prices: imputation of, 350; scanner data and, 349–50
- Monthly Törnqvist index. *See* Törnqvist indexes
- Nash equilibrium, 169
- National Income and Product Accounts (NIPA), 4
- New York Cereal Index, 356
- Office for National Statistics (UK), 8, 67
- Organizational-level indexes, 51–52
- Over-the-counter drugs: constructing price indexes with, 254–60; effect of sales of, on sales of prescription drugs, 251–54; markets for, 242–44. *See also* Prescription (Rx) drugs; Private-label products
- Package changes, 51
- Package size, and hedonic regression, 328–29
- Patent expiration: marketing intensity near, 244–46; prescription drugs and, 234–35
- Pepcid, 230–34, 246
- Point-of-sale (POS) systems, electronic, 17, 71
- PPIs (proton pump inhibitors), 231
- Prescription (Rx) drugs, 229–30; economic theory and prices of, 234–35; effect of sales of over-the-counter drugs on sales of, 251–54; markets for, 240–42; patent expiration and, 234–35; pricing of, and patent expiration, 246–49. *See also* Branded products; Histamine₂-receptor antagonists (H₂s); Over-the-counter drugs; Zantac
- Prevacid, 231
- Price elasticity, within-stratum, 24
- Price indexes: aggregation and, 30–34; alternative procedures for incorporating new drugs into, 235–40; calculation of, 135–38; for cereals, 366–74; constructing, with generic and over-the-counter “new good” entries, 254–60; formulas for, 52–55, 133–35; high-frequency data and, 124; interspatial price comparisons and, 33; organizational-level, 51–52; scanner data and, 116; traditional calculation method for, 4. *See also* Canadian Consumer Price Index; Consumer Price Index (CPI, US); Fisher indexes; Geomean indexes; Geometric indexes; Hedonic indexes; Laspeyres indexes; Matched indexes; Quality-adjusted price indexes; Retail Price Index (RPI, UK); Törnqvist indexes
- Price measurement, of ice cream, 7
- Price reference day, for RPI, 70
- Prilosec, 231, 232n4
- Private-label products: advertising costs for, 180–81; consumer promotions for, 182–83; empirical findings for markup ratios of, 188–200; inferring marginal costs and markups from, 168–73; markups of, 166–67; physical quality of, vs. branded products, 174–77; production methods, scale, factor prices for, 177–79; research and development for, 180; trade promotions for, 182; types of manufacturers of, 178. *See also* Branded products; Generic drugs; Over-the-counter drugs
- Probability sampling, 3
- Protonix, 231
- Proton pump inhibitors (PPIs), 231
- Quality-adjusted price indexes, 277–78; approaches to, using scanner data, 280–89

- Quality adjustment: consumer price index practice and, 302–10; scanner data and, 115, 119–20
- Quality changes, CPI and, 119
- Quantity weights, hedonic regressions and, 337–39
- Quotes, price: definition of, 40; eligibility of, 44; migrating, 45–46; scanner data replacing, 111–13; timing of, 42–43
- Ranitidine, 249–51
- Regression analysis, with scanner data for televisions, 100–103
- Replicates, scanner indexes and, 48
- Retail Price Index (RPI, UK), 8, 67–68; calculating, with scanner data for explicit weights for aggregation formulas, 83–84; coverage of, 70–71; data collection system for, 68–71; matching scanner price levels and changes to field price levels and changes, 75–82; research design for, 73–75; scanner data characteristics of, 71–72; store types and, 82–83. *See also* Canadian Consumer Price Index; Consumer Price Index (CPI, US)
- Rx drugs. *See* Prescription (Rx) drugs
- Sales taxes, scanner indexes and, 44–45
- Sample representativeness, scanner data and, 114–15
- Sampling, 2–3
- Sampling error, 3
- Sato-Vartia index: formula for, 55; results for, 55–62
- ScanData, 41–42
- Scanner data, 279; ability to link product attributes with, 5–6; advantages of, 89–90; approaches to quality-adjusted price indexes using, 280–89; benefits of, 113; for census of transactions, 2–3; for cereals, 356–66; challenges of, 6; characteristics of, and RPI, 71–72; as continuous-time data, 3–4; cost of acquiring, 118–19; cost-of-living index theory and, 151–53; cost savings with, 103; definition of, 1; explicit weights for aggregation formulas and, 83–84; future of, 117; household, 111; improving consumer price information with, 18–19; improving measurement of product quality in CPI, 25–28; improving quality of CPI measurements with, 19–25; imputating missing and suspect prices for, 47–48; index calculations for televisions with, 95–103; limitations of, 116–17; missing prices and, 349–50; observing price and quantity simultaneously with, 4–5; opportunities for economic measurement and, 2; quality adjustment and, 115; replacing price quotes with, 111–13; sample representativeness and, 114–15; for surveillance of new goods, 3; vs. survey sampling, 123; United States expenditures measured with, 17–18; for washing machines, 289–92, 298–302
- Scanner indexes: amalgamation and, 45; sales taxes and, 44–45; technical issues of, 42–49; variances and replicates in, 48
- ScanTrack. *See* ACNielsen ScanTrack
- Semilog model, of hedonic regression, 327
- Shopper households, 156–57
- Shopping behaviors, of households, 155–57
- SmithKline, 230
- Statistics Canada, 8–9; price index construction at, 89. *See also* Canadian Consumer Price Index
- Stock outs, 12
- Stretch-link method, 92, 93–94
- Superlative hedonic indexes, 282–84
- Surveys, 2–3
- Survey sampling, vs. scanner data, 123
- Tagamet, 230, 244–45; effect of sales of over-the-counter drugs on sales of, 253–54; pricing of, near patent expiration, 246–49; sales of, before and after patent expiration, 249–51
- Televisions, 89; consumer price index construction for, 90–95; index calculations with scanner data for, 95–103
- Time dummy variable hedonic method, 278, 280–81; results of, for scanner data for washing machines, 298–302; for washing machines, 292–93
- Törnqvist indexes, 21, 30; annual, formula for, 54; calculation of, 135–38; for cereals, 366–74; chained, 125; fixed-based, 125; formula for, 134–35; monthly, formula for, 54; results for, 55–62
- Trade promotions, for private labels vs. branded products, 182
- Tuna, canned, 124, 130–33; inventory behavior of, 138–44

- Unit values: definition of, 49; weekly, 50–51
- Universal Product Codes (UPCs), 17; package changes and, 51
- Variances, scanner indexes and, 48
- Washing machines, 317–18; scanner data for, 289–92, 298–302
- Waxman-Hatch Act, 232–33
- Weights: explicit, for aggregation formulas and scanner data, 83–84; hedonic regressions and, 337–39
- Within-stratum price elasticity, 24
- Zantac, 230–34, 245–46; effect of sales of over-the-counter drugs on sales of, 253–54; pricing of, near patent expiration, 246–49; sales of, before and after patent expiration, 249–51. *See also* Histamine₂-receptor antagonists (H₂s)
